Documentation

## 1. Workflow

2. Usage & File Discription

➢ **How to run the whole project?**

STEP1: Change directory to Collect/Scrape/input_urls, open urls.txt.

STEP2: Paste the Wikinews search result links, one link per line. The existing urls can be used as examples.

(Using the existing urls is recommended. If the user want to analyze the news with other topics, please uncomment the codes of event extraction in the main.py)

STEP3: Run main.py to get XML files.

STEP4: The subsequent steps are explained in README.txt in the directory Access.

➢ **How to find the description of each file?**

Each directory in the project includes a README.txt file which provides detailed description of files in it and the usage of the part.
